

Enterprise Policy: Food Safety & Fulfillment Regulations

Regulatory Compliance, Hygiene Mandates, and Quality Control Policy

1. Executive Policy Framework

This regulatory policy defines the operational requirements for ensuring food safety across all production kitchens, dark store fulfillment units, and distribution nodes. The primary objective is absolute alignment with national public health statutes, minimizing microbiological, chemical, and physical contamination risks.

2. Personnel Hygiene Mandates

All operators, culinary staff, assembly workers, and dispatch handlers must rigidly conform to the following personal cleanliness standards:

- **Mandatory Hand Hygiene:** Hand-washing must occur at a designated hand-washing station using antimicrobial liquid soap and warm water (minimum 38°C) for a duration of at least 20 seconds. This is required before starting work, after handling raw materials, post-break intervals, and after utilizing restrooms.
- **Protective Attire:** Staff within food production zones must continuously wear clean aprons, hairnets, and beard restraints (if applicable). Disposable nitrile gloves must be worn when manipulating direct-to-eat (RTE) foods and must be replaced hourly or immediately upon tearing.
- **Health Reporting Policy:** Any worker showing symptoms of gastrointestinal illness, vomiting, fever, or infectious skin lesions must be immediately excluded from food handling environments and can only return following a clear 48-hour symptom-free window or certified medical clearance.

3. Inventory & Raw Material Controls

Fulfillment centers must preserve structural safety by adhering to strict rotation and traceability metrics:

First-In, First-Out (FIFO) Protocol:

All incoming stock ingredients must be dated, tagged, and systematically cataloged. Older stock profiles must be utilized first. Staff must run daily inventory audits to identify items approaching expiration, removing items from service lines 48 hours prior to actual expiration.

3.1 Storage Tier Configurations

To avoid cross-contamination from raw elements to cooked foods, all walk-in commercial refrigerators must adhere to top-down hierarchical shelf positioning:

1. **Top Shelves (Tier 1):** Prepared Ready-to-Eat (RTE) foods, baked goods, and fully cooked meats.

2. **Middle Shelves (Tier 2):** Whole cuts of raw beef, pork, and seafood elements (minimum internal cooking temp: 63°C).
3. **Lower Shelves (Tier 3):** Raw ground meats and minced items (minimum internal cooking temp: 71°C).
4. **Bottom Shelves (Tier 4):** Raw poultry, whole or ground chicken, turkey, and duck (minimum internal cooking temp: 74°C).

4. Incident Management and Product Recall

In the event of an identified breach in food safety protocols or a customer contamination report, fulfillment sites must activate the following recall procedure:

1. **Immediate Quarantine:** Lock down the affected batch number within the inventory tracking system to block further dispatches.
2. **Traceability Audit:** Extract customer purchase logs within the 12-hour window to identify orders containing the matching batch components.
3. **Proactive Communication:** Issuance of urgent electronic notifications and SMS alerts to target customers advising immediate disposal, alongside processing automated financial refunds.
